

MTOS — Forms Todo List

Generated April 17, 2026

Objective

Make MTOS forms (1) previewable for real, (2) reflect 2026 market practices per tort, (3) editable via UI, and (4) auto-propagate any added field to lead profile, exports, and search.

Tasks

T001 DB schema — form_configurations table + leads.custom_fields JSONB

Blocked by: — **Status: Completed**

- Create lib/db/src/schema/form_configurations.ts with id (varchar PK = tort_id), label, category, valid_diagnoses, exposure_fields, extra_fields, custom_fields, rules, rejection_conditions (jsonb), updated_by, timestamps.
- Add custom_fields jsonb column to leads table.
- Push schema with: cd lib/db && pnpm drizzle-kit push --force.

T002 Form config service — DB reads with registry seed

Blocked by: T001 **Status: Completed**

- New artifacts/api-server/src/lib/form-config-service.ts — getConfig(tortId), getAllConfigs(), updateConfig(tortId, updates, userId), seed-on-startup.
- On boot, insert TORT_REGISTRY entries that don't exist in DB.
- Custom field shape: { key, label, type, required, placeholder?, options?, helper_text? }.

T003 Refactor /api/forms routes

Blocked by: T002 **Status: Completed**

- GET /api/forms/config and /:tortId !' DB.
- PUT /api/forms/config/:tortId !' admin-only update (validate field shape).
- POST /api/forms/config/:tortId/fields !' add custom field.
- DELETE /api/forms/config/:tortId/fields/:key !' remove custom field.
- Embed script generator includes custom_fields rendering.
- Form submission: extract & store custom_field values into leads.custom_fields JSONB.
- Update tort-engine validation to optionally use DB config.

T004 Update API spec + regen client

Blocked by: T003 **Status: Completed**

- Add new endpoints to lib/api-spec/openapi.yaml.
- Add CustomField, FormConfigUpdate types.
- Run codegen.

T005 CRM — real iframe preview + Form Builder edit dialog

Blocked by: T004 **Status: Completed**

- Replace fake placeholder with real iframe at /api/forms/embed/:tortId.
- Add 'Edit' button !' dialog: edit valid_diagnoses (chip input), add/remove/reorder custom fields.
- Save !' invalidate query !' preview re-renders with changes.

T006 Lead detail — render custom_fields dynamically

Blocked by: T004 **Status: Completed**

- Read lead.custom_fields and form config for the lead's tort_type.
- Render any custom field values in a 'Custom Fields' section.

- If form config has custom fields with no value on lead, show '—'.

T007 Update TORT_REGISTRY for 2026 market practices

Blocked by: — **Status: Completed**

- Expand diagnosis lists to current MDL/market standards.
- Add Suboxone (tooth decay), Paragard, Bard PowerPort, BoSsox if relevant.
- Refine rejection_conditions per current MDL filings.

T008 Test + code review

Blocked by: T005, T006, T007 **Status: In Progress**

- curl test: GET, PUT, embed render, submit with custom field, lead detail shows it.
- Playwright: navigate Form Engine, edit form, add custom field, preview, copy embed.
- Architect review with relevantFiles.
- Sub-task: proper TrustedForm installation — DB schema + embed inputs done; CSP/script load tuning in progress.
- Deferred (pending user decision): public unauthenticated /forms/submit with anti-abuse controls.
